

Steven Saji Paul Product Manager Long Beach, California, USA +1 562-686-7082 stevenspaul97@gmail.com Github Portfolio	
SUMMARY	
Product Manager with 5+ years of experience driving product strategy, business analysis, and enterprise solution delivery across healthcare and technology domains. Proven expertise in product roadmap planning, Agile execution, stakeholder management, SQL-driven analytics, and Voice of Customer research to deliver scalable, data-informed products that improve adoption, operational efficiency, and customer outcomes. Adept at translating complex business requirements into high-impact product solutions, leading cross-functional teams, and delivering measurable business value in fast-paced, customer-centric environments.	
SKILLS	
Product Management: Product Strategy, Product Road mapping, Product Lifecycle Management, Feature Prioritization, Backlog Management, User Story Development, Go-to-Market Strategy, Product Discovery Business Analysis: Requirements Gathering, Stakeholder Management, Business Process Analysis, Gap Analysis, Functional Specifications, Process Mapping, Acceptance Criteria, Business Rules Documentation Agile & Delivery: Agile (Scrum), Sprint Planning, Sprint Reviews, Cross-Functional Collaboration, Release Planning, SDLC, Change Management, Risk & Dependency Management Customer & Market Research: User Research, Customer Journey Mapping, Competitive Analysis, Market Research, Persona Development, Voice of Customer (VoC), Product Validation, KPI Definition Data & Analytics: SQL, Product Analytics, KPI Tracking, Dashboard Reporting, Data Analysis, A/B Testing, Metrics-Driven Decision Making, Business Intelligence Technical & Integration: REST APIs, System Integration, Enterprise Applications, ERP Systems, CRM Platforms, AWS (EC2, RDS), GitHub Testing & Quality: User Acceptance Testing (UAT), Test Planning, Defect Management, Regression Testing, System Integration Testing, Root Cause Analysis, Quality Assurance Tools & Collaboration: Jira, Confluence, Microsoft Visio, Microsoft Excel, Microsoft PowerPoint, Microsoft Office Suite, Miro, Figma	
EXPERIENCE	
Optum, CA Product Manager	Feb 2026 – Present
- Orchestrated end-to-end product strategy for a healthcare provider analytics platform, defining roadmap and feature prioritization that increased user adoption by 35% across 200+ client organizations within the first 6 months. - Synthesized Voice of Customer (VoC) insights from 50+ stakeholder interviews and competitive analysis to drive product discovery, resulting in 3 high-impact features that reduced claim processing time by 28% for 10M+ covered lives. - Directed cross-functional Agile squads across 4 scrum teams, managing backlog prioritization, release planning, and sprint reviews to deliver 12 major product releases on schedule with 98% on-time delivery rate. - Architected data-driven product decisions by establishing 15+ KPI dashboards using SQL and product analytics tools, enabling real-time monitoring of feature performance and reducing churn risk by 22%.	
Tata Consultancy Services, India Business Systems Analyst	May 2022 - Apr 2024
- Gathered and documented business requirements across 5+ enterprise product lines, conducting gap analysis, producing functional specifications, and translating stakeholder needs into actionable technical solutions delivered on schedule and aligned to business objectives. - Configured and customized enterprise platforms across multiple product lines, serving as the primary liaison between business stakeholders and technical teams, presenting proof-of-concept builds to client executives, and managing the full product delivery lifecycle from requirements through production deployment. - Led UAT cycles across multiple client environments, developing structured test plans, coordinating defect resolution, and achieving 95% defect resolution rates before go-live, reducing post-deployment system failures by 40%. - Built and maintained SQL-based queries, data reports, and operational dashboards to support financial analysis, KPI tracking, and client decision-making across interconnected enterprise systems, enabling data-driven continuous improvement decisions. - Authored and maintained technical documentation, including SOPs, business rules, configuration specifications, and integration workflow designs, creating reusable governance assets that accelerated delivery timelines and ensured operational consistency across future engagements.	
Tata Consultancy Services, India Quality Analyst	Nov 2019 - May 2022
- Developed 150+ structured test cases to validate enterprise application configurations across functional, regression, and integration testing phases, ensuring client-specific business rules and platform customizations met defined quality standards before go-live. - Delivered end-user training on updated application workflows, developing training guides, and conducting walkthroughs that supported confident platform adoption, and collaborated with development teams to reproduce and resolve defects efficiently across multiple client environments.	
PROJECTS	
ReqAgent - AI-Powered Requirements Intelligence Platform Python, Streamlit, Groq (LLaMA 3.3 70B), MongoDB, Neon Postgres	
- Built ReqAgent, a full-stack AI requirements intelligence platform (Python, Streamlit, Groq/LLaMA 3.3 70B, MongoDB, Neon Postgres) that converts raw stakeholder input into structured user stories, MoSCoW classifications, and priority scores in seconds. - Designed a dual-database architecture and automated conflict-detection engine that flags overlapping requirements across the entire backlog using AI-driven analysis. - Delivered full lifecycle tracking, a traceability matrix, and a live analytics dashboard, reducing manual requirements documentation effort and giving stakeholders real-time pipeline visibility.	
Quell AI: Intelligent Meeting Delegate	
- Owned end user experience design, defining user-facing product requirements, self-service access workflows, and onboarding documentation across web and mobile. - Defined product architecture and technical specs for a RAG-driven delegate system with ASR integration and permission-based document access, mapping flows across interaction, platform services, and core engine layers. - Contributed to stack selection (Python/Flask, Node.js/Vite, PostgreSQL, Llama/Mistral, GCP), balancing UX goals against engineering feasibility.	
ZeroNow: Real-Time AI Food Waste Marketplace	
- Defined product vision and coordinated delivery across three interconnected platform layers (AI, marketplace, blockchain), managing workstream interdependencies. - Ran competitive analysis against existing platforms, identifying a differentiated real-time surplus niche that shaped go-to-market strategy and feature prioritization. - Built the Business Model Canvas and Value Proposition Canvas, and defined adoption KPIs across five user segments with monitoring to catch low-engagement cohorts.	
EDUCATION	
Master of Science in Information Systems California State University, Long Beach	May 2026
Bachelor of Engineering in Information Technology University of Mumbai, India	May 2019
